# A General Communication System

Assignment Project Exam Help

<https://powcoder.com>

**Source** : The information source that generates the message to be communicated

**Encoder** : Operates on the message to produce a signal suitable for transmission

**Channel** : The medium used to transmit the signal

**Decoder** : Reconstructs the message from the signal

**Destination** : The entity that receives the message

## Communication over Noisy Channels

# Assignment Project Exam Help

A channel is some medium for transmitting messages

A **noisy channel** is a channel that potentially introduces **errors** in the sender's message

<https://powcoder.com>

### The Problem of Communication

"The fundamental problem of communication is that of reproducing at one point either exactly or approximately a message selected at another point."  
(Claude Shannon, 1948)

Add WeChat powcoder

## Example: Telephone Network

Source : Aditya

Encoder : Telephone handset

Channel : Analogue telephone line

Decoder : Telephone handset

Destination : Mark

Add WeChat powcoder

# Examples of Noisy Communication Channels

Other examples of noisy channels:

- A radio communication link
- VDSL NBN connection
- The complete link from camera, through editing, Netflix, the rest of the internet, VDSL link to home, wifi to TV screen
- Reproducing cells
- A magnetic hard disk drive
  - ▶ Channel does not need to involve physical movement

What would the other components be for each of these channels?

1 A General Communication System

# Assignment Project Exam Help

2 The Role of Uncertainty

3 Basic Concepts in Probability

<https://powcoder.com>

4 Relating Joint, Marginal and Conditional Probabilities

Add WeChat powcoder

5 Wrapping Up

# Assignment Project Exam Help

We can not avoid uncertainty when

- 1 Dealing with noise (imperfections) in the channel

<https://powcoder.com>

- 2 “Compressing” the messages (compare a high-resolution photograph of a manuscript with the typed text that captures the essence; or a transcript of a spoken utterance)

Add WeChat powcoder

# Assignment Project Exam Help

A noisy channel introduces errors in sender's message

Thus, receiver is uncertain that the message is what the sender intended

How to model, quantify, and mitigate this uncertainty?

Add WeChat powcoder

# Message Compression – I

Cover and Thomas, Example 1.1.2

## Assignment Project Exam Help

- Suppose we'd like to relay the outcome of an 8 horse race to a friend
  - ▶ We wish to convey one of  $\{ A, B, \dots, H \}$
- Suppose we encode the message as a binary string. A natural coding scheme is:

A  $\rightarrow$  000

B  $\rightarrow$  001

C  $\rightarrow$  010

$\vdots$

H  $\rightarrow$  111

Add WeChat powcoder

# Message Compression – II

Cover and Thomas, Example 1.1.2

- Now say the probabilities of the horses winning are

( $1/2, 1/4, 1/8, 1/16, 1/64, 1/64, 1/64, 1/64$ .)

- Encoding messages based on their probability of the being chosen will give shorter expected lengths:

<https://powcoder.com>

A  $\rightarrow$  0

B  $\rightarrow$  10

C  $\rightarrow$  110

D  $\rightarrow$  1110

E  $\rightarrow$  11110

F  $\rightarrow$  111100

G  $\rightarrow$  111101

H  $\rightarrow$  111111

Add WeChat powcoder

# What is “Information”?

Assignment Project Exam Help

For noise correction and message compression, we will need to quantify the **information** contained in a message

Roughly, “information” measures how much:

- **Unexpected** data a message contains

<https://powcoder.com>

Add WeChat powcoder

- The receiver's **uncertainty** is reduced on seeing the message

# The Case for Probability

We run into the notion of **uncertainty** when trying to pin down:

1 How to deal with channel noise

2 How to compress messages

3 What “information” means

<https://powcoder.com>

To make progress, we need to formalise uncertainty

Add WeChat powcoder

We will do this using **probability theory**

We now commence our *review* of probability; this will be hard going if you have not met it before!

Add WeChat powcoder

# Probability: Example

Quantification and Manipulation of Uncertainty (Bishop, PRML, 2006)

1 Pick a box at random

2 From the selected box, pick a fruit (apple or orange) at random

<https://powcoder.com>

Add WeChat powcoder

# Probability: Example

Quantification and Manipulation of Uncertainty (Bishop, PRML, 2006)

- 1 Pick a box at random
- 2 From the selected box, pick a fruit (apple or orange) at random
- 3 Observe the fruit type and return it back to the original box

<https://powcoder.com>

Add WeChat powcoder

## Probability: Example

Quantification and Manipulation of Uncertainty (Bishop, PRML, 2006) — Cont'd

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- Identity of the box is a random variable  $B \in \{r, b\}$
- Identity of the fruit is a random variable  $F \in \{a, o\}$

# Probability: Example

Quantification and Manipulation of Uncertainty (Bishop, PRML, 2006) — Cont'd

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

- Identity of the box is a random variable  $B \in \{r, b\}$
- Identity of the fruit is a random variable  $F \in \{a, o\}$

**Probability of an event:** Proportion of times it happens out of a large number of trials

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Suppose we repeat the selection process many times, and ended up picking up the blue box 60% of the time and the red box 40% of the time

- $p(B = r) = 0.4, p(B = b) = 0.6$

## Probability: Basic Properties

By definition,  $0 \leq p(B = b) \leq 1$  and  $0 \leq p(B = r) \leq 1$

Assignment Project Exam Help

Outcomes are mutually exclusive:

$$p(B = r \text{ AND } B = b) = p(B = r, B = b)$$

<https://powcoder.com>

Outcomes are jointly exhaustive:

$$\begin{aligned} p(B = r \text{ OR } B = b) &= p(B = r) + p(B = b) - p(B = r \text{ AND } B = b) \\ &= p(B = r) + p(B = b) \\ &= 1 \end{aligned}$$

Add WeChat powcoder

# Probability

What Types of Questions Can We Answer?

## Assignment Project Exam Help

- What is the probability of picking the red box, and an apple within that box?

- What is the (overall) probability of picking up an apple?

- Given that we selected a red box, what is the probability of selecting an apple?

We can answer these and more complex questions by using the *rules of probability*.

## Joint Probability

What is the probability of selecting the red box **and** selecting an apple?

**Assignment Project Exam Help**

**<https://powcoder.com>**

**Add WeChat powcoder**

## Joint Probability

What is the probability of selecting the red box **and** selecting an apple?

**Assignment Project Exam Help**

Joint Probability of a Set of Events

The proportion of times these events happened **together** out of the total number of trials.

<https://powcoder.com>

Add WeChat powcoder

## Joint Probability

What is the probability of selecting the red box **and** selecting an apple?

Joint Probability of a Set of Events

The proportion of times these events happened **together** out of the total number of trials.

If we repeated our experiment many (say  $N = 100$ ) times, and in 10 of the trials we saw  $B = r$  and  $F = a$ , then we may estimate

$$\begin{aligned} p(B = r \text{ AND } F = a) &= p(B = r, F = a) \\ &= \frac{10}{100} \\ &= 0.1 \end{aligned}$$

## Marginal Probability

What is the probability of an apple being picked, regardless of the box we selected?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## Marginal Probability

What is the probability of an apple being picked, regardless of the box we selected?

Marginal Probability of an Event

The proportion of times that this event happened out of the total number of trials.

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## Marginal Probability

What is the probability of an apple being picked, **regardless** of the box we selected?

Marginal Probability of an Event

The proportion of times that this event happened out of the total number of trials.

Remember that we selected a red box and an apple in 10 out of 100 trials

Say that in 45 of the trials, we selected a blue box and an apple

So, **irrespective of B**, an apple was selected  $45 + 10 = 55$  times, and:

$$p(F = a) = \frac{55}{100} = \frac{11}{20}$$

## Conditional Probability

What is the probability of an apple being picked up, **given that** a red box was selected?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

## Conditional Probability

What is the probability of an apple being picked up, **given that** a red box was selected?

Conditional Probability of an Event

The conditional probability of an event  $X$  with respect to an event  $Y$  is the proportion of times that  $X$  happens out of the times that  $Y$  happens.

<https://powcoder.com>

Add WeChat powcoder

## Conditional Probability

What is the probability of an apple being picked up, **given that** a red box was selected?

### Conditional Probability of an Event

The conditional probability of an event  $X$  with respect to an event  $Y$  is the proportion of times that  $X$  happens out of the times that  $Y$  happens.

The trials where we selected a blue box are **irrelevant**, whether or not an apple was selected

We selected a red box **and** an apple 10 out of 100 times

We selected a red box (regardless of the fruit) 40 out of 100 times

$$p(F = a \text{ GIVEN } B = r) = p(F = a | B = r) = \frac{10}{40} = \frac{1}{4}$$

## Conditional Probability

What is the probability of an apple being picked up, **given that** a red box was selected?

### Conditional Probability of an Event

The conditional probability of an event  $X$  with respect to an event  $Y$  is the proportion of times that  $X$  happens out of the times that  $Y$  happens.

The trials where we selected a blue box are **irrelevant**, whether or not an apple was selected

We selected a red box **and** an apple 10 out of 100 times

We selected a red box (regardless of the fruit) 40 out of 100 times

$$p(F = a \text{ GIVEN } B = r) = p(F = a | B = r) = \frac{10}{40} = \frac{1}{4}$$

Can we write this in terms of the joint and marginal probabilities?
