- 90% of people with McD syndrome are frequent hamburger eaters

https://powcoder.com

- Probability of someone having McD syndrome: $1/10000$

Add WeChat powcoder

- Proportion of hamburger eaters is about 50%

What is the probability that a hamburger eater will have McD syndrome?

Bayesian Inference:

Example 1: Formalization

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

Add WeChat powcoder

Bayesian Inference:

Example 1: Formalization

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

$$p(H = 1|McD = 1) = 9/10$$

Add WeChat powcoder

Bayesian Inference:

Example 1: Formalization

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

$$p(H = 1|McD = 1) = 9/10 \qquad p(McD = 1) = 10^{-4}$$

Add WeChat powcoder

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

$$p(H = 1|McD = 1) = 9/10 \qquad p(McD = 1) = 10^{-4}$$
$$p(H = 1) = 1/2$$

Add WeChat powcoder

Bayesian Inference:

Example 1: Formalization

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

$$p(H = 1|McD = 1) = 9/10 \qquad p(McD = 1) = 10^{-4}$$
$$p(H = 1) = 1/2$$

We need to compute $p(McD = 1|H = 1)$, *the probability of a hamburger eater having McD syndrome.*

Add WeChat powcoder

Bayesian Inference:

Example 1: Formalization

Assignment Project Exam Help

Let $McD \in \{0, 1\}$ be the variable denoting having the McD syndrome and $H \in \{0, 1\}$ be the variable denoting a hamburger eater. Therefore:

https://powcoder.com

$$p(H = 1|McD = 1) = 9/10 \qquad p(McD = 1) = 10^{-4}$$
$$p(H = 1) = 1/2$$

We need to compute $p(McD = 1|H = 1)$, *the probability of a hamburger eater having McD syndrome.*

Add WeChat powcoder

Any ballpark estimates of this probability?

Assignment Project Exam Help

$$p(McD = 1|H = 1) = \frac{p(H = 1|McD = 1)p(McD = 1)}{p(H = 1)}$$
$$= 1.8 \times 10^{-4}$$

https://powcoder.com

Add WeChat powcoder

Bayesian Inference:

Example 1: Solution

Assignment Project Exam Help

$$p(McD = 1|H = 1) = \frac{p(H = 1|McD = 1)p(McD = 1)}{p(H = 1)}$$
$$= 1.8 \times 10^{-4}$$

https://powcoder.com

Repeat the above computation if the proportion of hamburger eaters is rather small. (say in France) 0.001.

&= \frac{(0.95)(0.01)}{(0.95)(0.01)+(0.05)(0.99)} \\
&\approx 0.16
\end{aligned}
$$

https://powcoder.com

Add WeChat powcoder

The probability of the man being a terrorist is $\approx \frac{1}{6}$

Example 2: Detecting Terrorists:

Posterior Versus Prior Belief

Assignment Project Exam Help

While the man has a low probability of being a terrorist, our belief has increased compared to our prior:

$$\frac{p(T = 1|S = 1)}{p(T = 1)} = \frac{0.16}{0.01} = 16$$

https://powcoder.com

i.e. our belief in him being a terrorist has gone up by a factor of 16

Since terrorists are so rare, a factor of 16 does not result in a very high (absolute) probability or belief

Add WeChat powcoder

(Aside: They are indeed very rare. For an intruiging (and surprising) example of the implications of inability to take account of actual base rates (in the example above we made the numbers up), and the effect on people's subsequent decisions, see Gerd Gigerenzer, Dread Risk, September 11, and Fatal Traffic Accidents, *Psychological Science* 15(4), 286–287, (2004); Gerd Gigerenzer, Out of the Frying Pan into the Fire: Behavioural Reactions to Terrorist Attacks, *Risk Analysis* 26(2), 347–351 (2006). His calculation (which of course is based on some assumptions) is that in the year following 9/11, 6 times the number of people who were killed as passengers *additionally* died on roads (that is the increase in road deaths due to people chosing to drive instead of flying)! He calls the reaction to very low probability events with a bad outcome "dread risk".)

We have that:

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r,g,b\}} p(H = b \mid C = c)\, p(C = c) \\
&= (1/2)\,(1/3) + (1)\,(1/3) + (0)\,(1/3) \\
&= 1/2
\end{aligned}
$$

Assignment Project Exam Help

https://powcoder.com

Add WeChat powcoder

Example 3: The Monty Hall Problem:

Solution

We have that:

Assignment Project Exam Help

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r, g, b\}} p(H = b \mid C = c)\, p(C = c) \\
&= (1/2)\,(1/3) + (1)\,(1/3) + (0)\,(1/3) \\
&= 1/2
\end{aligned}
$$

https://powcoder.com

Therefore:

Add WeChat powcoder

Example 3: The Monty Hall Problem:

Solution

We have that:

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r,g,b\}} p(H = b | C = c) p(C = c) \\
&= (1/2)(1/3) + (1)(1/3) + (0)(1/3) \\
&= 1/2
\end{aligned}
$$

Assignment Project Exam Help
https://powcoder.com

Therefore:

$$
p(C = r | H = b) = \frac{p(H = b | C = r) p(C = r)}{p(H = b)}
$$

Add WeChat powcoder

Example 3: The Monty Hall Problem:

Solution

We have that:

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r, g, b\}} p(H = b | C = c) p(C = c) \\
&= (1/2)\,(1/3) + (1)\,(1/3) + (0)\,(1/3) \\
&= 1/2
\end{aligned}
$$

Therefore:

$$
p(C = r | H = b) = \frac{p(H = b | C = r) p(C = r)}{p(H = b)} = \frac{(1/2)(1/3)}{(1/2)} = 1/3
$$

Assignment Project Exam Help
https://powcoder.com
Add WeChat powcoder

Example 3: The Monty Hall Problem:

Solution

We have that:

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r,g,b\}} p(H = b | C = c) p(C = c) \\
&= (1/2)\,(1/3) + (1)\,(1/3) + (0)\,(1/3) \\
&= 1/2
\end{aligned}
$$

Therefore:

$$
p(C = r | H = b) = \frac{p(H = b | C = r) p(C = r)}{p(H = b)} = \frac{(1/2)(1/3)}{(1/2)} = 1/3
$$

Similarly, $p(C = g | H = b) = 2/3$.

Assignment Project Exam Help
https://powcoder.com
Add WeChat powcoder

Example 3: The Monty Hall Problem:

Solution

We have that:

$$
\begin{aligned}
p(H = b) &= \sum_{c \in \{r,g,b\}} p(H = b | C = c) p(C = c) \\
&= (1/2)\,(1/3) + (1)\,(1/3) + (0)\,(1/3) \\
&= 1/2
\end{aligned}
$$

Therefore:

$$p(C = r | H = b) = \frac{p(H = b | C = r) p(C = r)}{p(H = b)} = \frac{(1/2)(1/3)}{(1/2)} = 1/3$$

Similarly, $p(C = g | H = b) = 2/3$.

You should switch from your initial choice to the other box in order to increase your chances of winning the prize!

Example 3: The Monty Hall Problem:

Illustration of the Solution

Assignment Project Exam Help
https://powcoder.com
Add WeChat powcoder

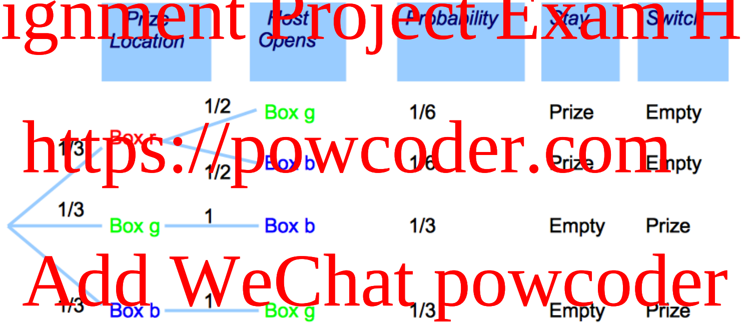

Illustration of the solution when you have initially selected box r.

Example 3: The Monty Hall Problem:

Another Perspective

Assignment Project Exam Help

Switching is bad if, and only if, we initially picked the prize box (because if not, the other remaining box must contain the prize)

https://powcoder.com

We picked the prize box with probability $1/3$. This is independent of the host's action

Hence, with probability $2/3$, switching will reveal the prize box

Add WeChat powcoder

Example 3: The Monty Hall Problem:

Variants to Ponder

Assignment Project Exam Help

Would switching be rational if:

- The host only revealed a box when he knew we picked the right one?

https://powcoder.com

- The host only revealed a box when he knew we picked the wrong one?

Add WeChat powcoder

- The host is himself unaware of the prize box, and reveals a box at random, which by chance does not have the prize?

1. Bayes' Rule: Examples
   - Eating Hamburgers
   - Detecting Terrorists
   - The Monty Hall Problem

2. Moments for functions of two discrete Random Variables

3. The meaning of Probability

4. Wrapping Up

Assignment Project Exam Help

https://powcoder.com

Add WeChat powcoder

The Expected Value of a Function of Two Discrete Random Variables

(Assuming you have met Expectation $E[X]$ and Variance $\mathrm{Var}(X)$ before . . .)

Assignment Project Exam Help

The expected value of a function $g(X, Y)$ of two discrete random variables is defined as

https://powcoder.com

$$E[g(X, Y)] = \sum_{x} \sum_{y} g(x, y) p(X = x, Y = y). \tag{1}$$

In particular, the expected value of X is given by

Add WeChat powcoder

$$E[X] = \sum_{x} \sum_{y} x p(X = x, Y = y). \tag{2}$$

It should be noted that if we have already calculated the marginal distribution of X, then it is simpler to calculate $E[X]$ using this.

Covariance and the Correlation Coefficient

Assignment Project Exam Help

The covariance between X and Y, $\mathrm{Cov}(X, Y)$ is given by

$$\mathrm{Cov}(X, Y) = E(XY) - E(X)E(Y) \tag{3}$$

https://powcoder.com

Note that by definition $\mathrm{Cov}(X, X) = E(XX) - E(X)E(X) = \mathrm{Var}(X)$.
The coefficient of correlation between X and Y is given by

$$\rho(X, Y) = \frac{\mathrm{Cov}(X, Y)}{\sqrt{\mathrm{Var}(X)\mathrm{Var}(Y)}} \tag{4}$$

Add WeChat powcoder

Always in $[-1, 1]$.

Example

Discrete random variables X and Y have the following joint distribution:

Assignment Project Exam Help

	$Y=-1$	$Y=0$	$Y=1$
$X=0$	0	$\frac{1}{3}$	0
$X=1$	$\frac{1}{3}$	0	$\frac{1}{3}$

Calculate

https://powcoder.com

1. $p(X > Y)$
2. marginal distributions of X and Y
3. expected values and variances of X and Y
4. coefficient of correlation between X and Y

Add WeChat powcoder

Are X and Y independent?

Example

Assignment Project Exam Help

To calculated the probability of such an event, note that we sum over all the cells which correspond to that event. Hence,

https://powcoder.com

$$
\begin{aligned}
p(X > Y) = p(X = 0, Y = -1) + p(X = 1, Y = -1) \\
+ p(X = 1, Y = 0) = \frac{1}{3}
\end{aligned}
$$

Add WeChat powcoder

Example

Recall that

$$p(X = x) = \sum_y p(X = x, Y = y).$$

Assignment Project Exam Help

Hence,

https://powcoder.com

$$p(X = 0) = \sum_{y=-1}^{1} p(X = 0, Y = y) = 0 + \frac{1}{3} + 0 = \frac{1}{3}$$

$$p(X = 1) = \sum_{y=-1}^{1} p(X = 1, Y = y) = \frac{1}{3} + 0 + \frac{1}{3} = \frac{2}{3}$$

Add WeChat powcoder

Note that after obtaining $p(X = 0)$, we could calculate $p(X = 1)$ by using the fact that

$$p(X = 1) = 1 - p(X = 0), \tag{5}$$

since X only takes the values 0 and 1.

Example

Similarly,

$$p(Y=-1) = \sum_{x=0}^{1} p(X=x, Y=-1) = 0 + \frac{1}{3} = \frac{1}{3}$$

$$p(Y=0) = \sum_{x=0}^{1} p(X=x, Y=0) = \frac{1}{3} + 0 = \frac{1}{3}$$

$$p(Y=1) = 1 - p(Y=-1) - p(Y=0) = \frac{1}{3}$$

Add WeChat powcoder

Example

Assignment Project Exam Help

We then calculate the expected values and variances of X and Y from these marginal distributions.

https://powcoder.com

$$E(X) = \sum_{x=0}^{1} x\,p(X = x) = 0 \times \frac{1}{3} + 1 \times \frac{2}{3} = \frac{2}{3}$$

Add WeChat powcoder

$$E(Y) = \sum_{y=-1}^{1} y\,p(Y = y) = -1 \times \frac{1}{3} + 0 \times \frac{1}{3} + 1 \times \frac{1}{3} = 0.$$

Example

To calculate the variances of X and Y, $\mathrm{Var}(X)$ and $\mathrm{Var}(Y)$, we use the formula

$$\mathrm{Var}(X) = E(X^2) - (E(X))^2.$$

Assignment Project Exam Help

$$E(X^2) = \sum_{x=0}^{1} x^2 p(X = x) = 0^2 \times \frac{1}{3} + 1^2 \times \frac{2}{3} = \frac{2}{3}$$

https://powcoder.com

$$E(Y^2) = \sum_{y=-1}^{1} y^2 p(Y = y) = (-1)^2 \times \frac{1}{3} + 0^2 \times \frac{1}{3} + 1^2 \times \frac{1}{3} = \frac{2}{3}.$$

Add WeChat powcoder

Thus we get

$$\mathrm{Var}(X) = \frac{2}{3} - \left(\frac{2}{3}\right)^2 = \frac{2}{9}$$

$$\mathrm{Var}(Y) = \frac{2}{3} - (0)^2 = \frac{2}{3}$$

Example

To calculate the correlation coefficient, we first calculate the covariance between X and Y. We have

$$\mathrm{Cov}(X, Y) = E(XY) - E(X)E(Y).$$

where

$$E(XY) = \sum_{x=0}^{1} \sum_{y=-1}^{1} xy\, p(X = x, Y = y)$$

$$= 0(-1)0 + 0(0)\frac{1}{3} + 0(1)0 + 1(-1)\frac{1}{3} + 1(0)0 + 1(1)\frac{1}{3} = 0$$

Thus we get

$$\mathrm{Cov}(X, Y) = E(XY) - E(X)E(Y) = 0 - \frac{2}{3} \times 0 = 0.$$

From the definition of the correlation coefficient,

$$\rho(X, Y) = 0.$$

Cox Axioms

Given $B(x)$, $B(\bar{x})$, $B(x, y)$, $B(x|y)$, $B(y)$:

1. Degrees of belief can be ordered
2. $B(x) = f[B(\bar{x})]$
3. $B(x, y) = g[B(x|y), B(y)]$

In practice one needs to make use of both interpretations. Wise to be open to both. This is a huge topic which we can not get into further here. Note that Mackay was firmly in the Bayesian camp...
